

the art of style

Our trend-setting team of designers continually introduce new colors, new styles, and new fabrics, because we know it's not enough that our products provide the most effective Robotic Massage® on the market. To deserve a place in your environment, our chairs must be great looking as well as therapeutic.

It's our way of saying we understand what you want.

the science of comfort

Everyone likes to feel good. At **Interactive Health®**, it's all we think about.

Our team of scientists, researchers, and engineers analyze the treatments used by massage therapists, chiropractors, and physicians, and turn those techniques into the sophisticated **Human Touch Technology®** mechanisms that animate our family of chairs. By building on our decades of experience as the world leader in massage technology, we consistently produce the most advanced Robotic Massage® systems ever devised.

Ottoman 2.0™ HT-980
ROBOTIC CALF & FOOT MASSAGE

soothe your soles.

This compact unit provides a powerful, three-dimensional **Human Touch Technology**® leg massage that feels like strong hands kneading along the length of your calves, while from below, “thumbs” firmly massage the back of each leg. Or, insert your feet, and let the “hands” and “thumbs” soothe your soles. Ottoman 2.0™ operates at two different speeds, and includes a pre-programmed mode. You can adjust height and angle for maximum comfort and even use it as a conventional footrest.

A total of 20 rollers are positioned to massage the arches, heels, and balls of your feet. The 10 rollers on each foot simulate the ancient principal of reflexology, which is the belief that pressure applied to specific t benefits other parts of the body.

Best of all, you can pair your Ottoman 2.0™ with our new iJoy™100 and enjoy **Human Touch Technology's**® gentle pampering “hands” massaging your entire back at the same time your feet and legs are being treated.

Our multi-patent **Human Touch Technology**® massage system so closely replicates the therapeutic techniques used by back and spinal care professionals that it is the preferred technology of the American College of Chiropractic Orthopedists. The iJoy™100 is designed to follow the natural contour of your spine, and move three-dimensionally in four different modes.
